

## Executive Summary

### Request for Authorization to Implement (Undergraduate Minor in Climate Change and Society)

<b>Requested by</b>	School of Natural Resources and the Environment (CALs)
<b>CIP Code</b>	03.0103, Environmental Studies
<b>Purpose of Program</b>	<p>People, animals, plants, and all living organisms are being impacted by long-term changes in temperatures and ecosystems around the world. This global change is an increasingly dominant fact of life for all human and natural systems, and we can see the impacts all around us. In many parts of the world, governments and organizations have already been forced to adapt to ensure basic services that are essential for human civilization—including water, food, clean air, livable climate, renewable resources, and natural areas—will continue to be available for their communities.</p> <p>Climate change is also creating unprecedented new opportunities for innovation and economic growth; the jobs of the future are already aligning with solving the tremendous reorganization of the global economy driven by this global change. College students today will live their entire personal and professional lives in a world that is being shaped by these rapidly-changing forces; there is no part of our world that will not be touched by global change.</p> <p>The Minor in Climate Change and Society is designed to supplement the career interests of students in any field who want to understand how global change will affect their professional and personal lives and adapt to new emerging career opportunities. The CCS Minor curriculum ensures basic competency in three primary areas, taking advantage of UArizona’s expert faculty. First, students will have the opportunity to understand the physical and natural realities of global change, including what is driving these changes and how they are being manifested in today’s world. The component of the Minor is designed to enable students, as current and future citizens, to distinguish fact from fiction, and learn important skills in critical thinking about important global issues. Second, the Minor will examine how societies are adapting to address these challenges, both through short-term adaptation and via long-term restructuring of the global economy. The third component of the Minor is intended to be solutions-oriented; instead of instilling feelings of helplessness and fatalism, we hope to inspire students to see the enormous range of creative possibilities in technological and social change that will be key to the coming century. Students will have the flexibility within the Minor to select electives to match their curriculum to their specific academic and career interests and have the opportunity to practice what they’ve learned through internships or research. The ultimate goal of the Minor is to produce a generation of UA alumni who will be effective professionals and educated world citizens. The Minor is designed to respond to and advance multiple goals articulated in the <i>University of Arizona Strategic Plan</i>.</p>

**Approvals:**

ABOR  
 Undergraduate Council  
 CAAC  
 Faculty Senate

---

For use by Curricular Affairs:

- Create approval memo
- Send memo to college/dept and acad\_org listserv
- Create UAccess Plan Table code(s) (secondary?)
- Upload approval memo and proposal documents to UAccess Plan Table
- Notify acad\_org of the plan code creation
- Notify ADVIP team
- Update API, if necessary

## New Academic Program Workflow Form

### General

**Proposed Name: Climate Change and Society**

Transaction Nbr: 00000000000058

Plan Type: Minor

Academic Career: Undergraduate

Degree Offered:

Do you want to offer a minor? N

Anticipated 1st Admission Term: Sprg 2021

### Details

Department(s):

#### AGSC

DEPTMNT ID	DEPARTMENT NAME	HOST

LOCATION	DESCRIPTION
TUCSON	Tucson

**Admission application terms for this plan:** Spring: Y Summer: Y Fall: Y

**Plan admission types:**

Freshman: Y Transfer: Y Readmit: Y Graduate: N

Non Degree Certificate (UCRT only): N

Other (For Community Campus specifics): N

**Plan Taxonomy:** 03.0103, Environmental Studies.

Program Length Type: Program Length Value: 0.00

Report as NSC Program:

SULA Special Program:

**Print Option:**

Diploma: Y Minor in Climate Change and Society

Transcript: Y Minor in Climate Change and Society

**Conditions for Admission/Declaration for this Major:**

Students will need to meet with an advisor in SNRE to go over a course plan and declare the minor

**Requirements for Accreditation:**

NA

## **Program Comparisons**

### **University Appropriateness**

The proposed Minor in Climate Change and Society responds directly to multiple goals articulated in the University of Arizona Strategic Plan. Among the key goals in the Strategic Plan that are addressed and advanced by the proposed Minor are the following:

Pillar 1: The Wildcat Journey. Driving Student Success for a Rapidly Changing World

1.1A1: Strategically recruit prospective high-potential undergraduate students. Having an active, solutions-oriented major addressing the concerns of many young people today will encourage them to see the University of Arizona as a place where key issues are addressed head-on in a constructive fashion. A recent Gallup Poll found that 70% of Americans aged 18-34 worried "a great deal or a fair amount" about the climate and global warming (US News and World Report 13 November 2019). A 2018 Washington Post/Kaiser Family Foundation study found that one-quarter of all American teenagers are aware of the challenges of climate change and have taken part in some form of active engagement. Careers in climate, sustainability rank among the 2 fastest Growing Occupations2 by the US Bureau of Labor Statistics (April 2019). These figures indicate a remarkably high level of awareness among high-school students, and thus an extraordinary recruitment opportunity for the University of Arizona. Offering a minor in global change to any student in the University will put UA in the forefront of its peer institutions. While many institutions offer Master2s and advanced degrees in climate change and related subjects, few presently offer degrees for undergraduates. The UA CCS Minor will be unique in being designed explicitly to attract students across campus: journalism, political science, economics, sociology, law, business, and the arts.

1.2A1: Design a new Gen Ed curriculum. Under the UA Strategic Plan, the transformed General Education (GE) curriculum will prepare students for a changing and complex world. No aspect of our changing world is more urgent, and with more currency across all fields of study and all aspects of the global economy, than climate and associated global changes. Indeed, it can be argued persuasively that if there is any single aspect of the world that today's young people must understand as they graduate and take their places in society, it is the profound challenges and enormous opportunities of global climate change. The Climate Change and Society Minor will allow students whose interests and curiosity are stimulated in GE courses to pursue the subject further, while still allowing them to choose and follow their own major degrees of interest.

#### Pillar 2: Grand Challenges

2.2A: Build upon UA eminence in environmentally-oriented areas of research and education. As the University pursues its mission to become a top-ten ranked environmental university in the world, climate change impacts and adaptation must rise to the very top of institutional priorities. Much of the University's current expertise is in basic climate science and impacts, such as on ecosystems and water. It is noteworthy that the Grand Challenges associated with global change include not only outstanding research on its causes and consequences, but also intensive and productive research in effective climate adaptation and, ultimately, solutions. The proposed Minor will emphasize not only basic climate literacy, but also an orientation toward finding solutions space in both technological and social change.

#### Pillar 3: The Arizona Advantage

3.1A and 3.1B: Strengthen the impact and visibility of UA's commitment to equity and support of diverse communities, and Institutionalize commitment to Hispanic advancement. As a campus-wide Minor, the proposed program will provide opportunities to advance this component of the University's Mission and Strategic Plan. Lower-income communities and communities of color are affected disproportionately by climate change, creating an additional motivation for a wide range of students to be interested in understanding climate change, its effects and solutions. We propose to engage in specific targeted outreach to these communities for students interested in global change. Examples may include the Arizona's Science, Engineering, and Math Scholars (ASEMS) Program, initiatives to promote Campus-Community Outreach for STEM Diversity, and other programs of the Office of the Provost, Hispanic Serving Institution (HSI) Initiatives, the Office of Diversity and Inclusive Excellence, and the Office of Leadership and Organizational Development.

The proposed minor is consistent with the College of Agriculture and Life Sciences strategic plan in its purpose of ensuring "resilience and health of our communities, people, environments, and economies locally, regionally, and globally." <https://cals.arizona.edu/about/strategic-planning/cals-strategic-plan/mission>. This new minor is also in line with the CALS mission of increasing

our student's readiness for new careers that haven't yet been invented, which will "enable their future success in the regional and global economies."

### Arizona University System

NBR	PROGRAM	DEGREE	#STDNTS	LOCATION	ACCRDT
-----	---------	--------	---------	----------	--------

### Peer Comparison

Our proposed minor is similar to University of Montana and UCSD Scripp's Climate Change Studies minor in that emphasis is placed not only on the science behind climate change, but the social, political, and economic aspects as well. Like the other institutions, our proposed minor incorporates a Sustainable Actions and Solutions topic area that can tailored to a student's major and career interests. Most related minors at other institutions focus only on the climate science. While the two peer institutions require an experiential component, our minor includes both internships and a practicum as options in the Sustainable Actions and Solutions area, not required components.

### Faculty & Resources

#### Faculty

Current Faculty:

INSTR ID	NAME	DEPT	RANK	DEGREE	FCLTY/%
12107555	John Koprowski	1239	Professor	Doctor of Philosophy	5.00

22071345	William Smith	1239	Assit. Prof	Doctor of Philosophy	10.00

### Additional Faculty:

We do not anticipate the need for additional faculty during the initiation of the program since all courses and administration can be accomplished by current faculty members.

### Current Student & Faculty FTE

DEPARTMENT	UGRD HEAD COUNT	GRAD HEAD COUNT	FACULTY FTE
1239	240	75	32.00

### Projected Student & Faculty FTE

DEPT	UGRD HEAD COUNT			GRAD HEAD COUNT			FACULTY FTE		
	YR 1	YR 2	YR 3	YR 1	YR 2	YR 3	YR 1	YR 2	YR 3
1239	10	20	30	0	0	0	32.00	32.00	32.00

### Library

#### Acquisitions Needed:

We do not anticipate this minor creating a need for additional library acquisitions.

### Physical Facilities & Equipment

#### Existing Physical Facilities:

The existing facilities and equipment should be sufficient for the proposed program because the courses in the minor are being taught using the resources currently available.

#### Additional Facilities Required & Anticipated:

We do not anticipate this minor creating a need for additional physical facilities or equipment because the courses in the minor are being taught using the resources currently available.

### Other Support

#### Other Support Currently Available:

SNRE currently has 1.5 FTE academic advisors who will be able to assist students with adding the minor. Existing faculty in the department should be able to advise students choosing to complete internships or practicums and curriculum co-advisors in SGD and Geosciences can assist with these as needed.

#### Other Support Needed over the Next Three Years:

We do not anticipate the need for additional staff or other assistance as the current staff in SNRE should be able to handle academic advising and administrative needs.

**NEW ACADEMIC PROGRAM-STANDALONE UNDERGRADUATE MINOR  
ADDITIONAL INFORMATION FORM**

- I. MINOR DESCRIPTION**— provide a marketing/promotional description for the proposed minor. Include the purpose, nature, and highlights of the curriculum, faculty expertise, etc. The description should match departmental and college websites, handouts, promotional materials, etc.

People, animals, plants, and all living organisms are being impacted by long-term changes in temperatures and ecosystems around the world. This global change is an increasingly dominant fact of life for all human and natural systems, and we can see the impacts all around us. In many parts of the world, governments and organizations have already been forced to adapt to ensure basic services that are essential for human civilization—including water, food, clean air, livable climate, renewable resources, and natural areas—will continue to be available for their communities.

Climate change is also creating unprecedented new opportunities for innovation and economic growth; the jobs of the future are already aligning with solving the tremendous reorganization of the global economy driven by this global change. College students today will live their entire personal and professional lives in a world that is being shaped by these rapidly-changing forces; there is no part of our world that will not be touched by global change.

The Minor in Climate Change and Society is designed to supplement the career interests of students in any field who want to understand how global change will affect their professional and personal lives and adapt to new emerging career opportunities. The CCS Minor curriculum ensures basic competency in three primary areas, taking advantage of UArizona's expert faculty. First, students will have the opportunity to understand the physical and natural realities of global change, including what is driving these changes and how they are being manifested in today's world. The component of the Minor is designed to enable students, as current and future citizens, to distinguish fact from fiction, and learn important skills in critical thinking about important global issues. Second, the Minor will examine how societies are adapting to address these challenges, both through short-term adaptation and via long-term restructuring of the global economy. The third component of the Minor is intended to be solutions-oriented; instead of instilling feelings of helplessness and fatalism, we hope to inspire students to see the enormous range of creative possibilities in technological and social change that will be key to the coming century. Students will have the flexibility within the Minor to select electives to match their curriculum to their specific academic and career interests and have the opportunity to practice what they've learned through internships or research. The

ultimate goal of the Minor is to produce a generation of UA alumni who will be effective professionals and educated world citizens. The Minor is designed to respond to and advance multiple goals articulated in the *University of Arizona Strategic Plan*.

- II. NEED FOR THE MINOR/JUSTIFICATION-** provide market analysis data or other tangible evidence of the need for and interest in the proposed minor. This might include results from surveys of current students, alumni, and/or employers or reference to student enrollments in similar programs in the state or region. Curricular Affairs can provide a job posting/demand report by skills obtained/outcomes of the proposed minor. Please contact [Martin Marquez](#) to request the report for your proposal.

**The proposed Minor in Climate Change and Society responds directly to multiple goals articulated in the University of Arizona Strategic Plan. Among the key goals in the Strategic Plan that are addressed and advanced by the proposed Minor are the following:**

**Pillar 1: The Wildcat Journey. Driving Student Success for a Rapidly Changing World**

**1.1A1: Strategically recruit prospective high-potential undergraduate students.** Having an active, solutions-oriented major addressing the concerns of many young people today will encourage them to see the University of Arizona as a place where key issues are addressed head-on in a constructive fashion. A recent Gallup Poll found that 70% of Americans aged 18-34 worried "a great deal or a fair amount" about the climate and global warming (*US News and World Report* 13 November 2019). A 2018 Washington Post/Kaiser Family Foundation study found that one-quarter of all American teenagers are aware of the challenges of climate change and have taken part in some form of active engagement. Careers in climate, sustainability rank among the "fastest Growing Occupations" by the US Bureau of Labor Statistics (April 2019). These figures indicate a remarkably high level of awareness among high-school students, and thus an extraordinary recruitment opportunity for the University of Arizona.

Offering a minor in global change to any student in the University will put UA in the forefront of its peer institutions. While many institutions offer Master's and advanced degrees in climate change and related subjects, few presently offer

degrees for undergraduates. The UA CCS Minor will be unique in being designed explicitly to attract students across campus: journalism, political science, economics, sociology, law, business, and the arts.

**1.2A1: Design a new Gen Ed curriculum.** Under the UA Strategic Plan, the “transformed General Education (GE) curriculum...will prepare students for a changing and complex world.” No aspect of our changing world is more urgent, and with more currency across all fields of study and all aspects of the global economy, than climate and associated global changes. Indeed, it can be argued persuasively that if there is any single aspect of the world that today’s young people must understand as they graduate and take their places in society, it is the profound challenged – and enormous opportunities – of global climate change. The Climate Change and Society Minor will allow students whose interests and curiosity are stimulated in GE courses to pursue the subject further, while still allowing them to choose and follow their own major degrees of interest.

## **Pillar 2: Grand Challenges**

**2.2A: Build upon UA eminence in environmentally-oriented areas of research and education.** As the University pursues its mission to become a top-ten ranked environmental university in the world, climate change impacts and adaptation must rise to the very top of institutional priorities. Much of the University’s current expertise is in basic climate science and impacts, such as on ecosystems and water. It is noteworthy that the Grand Challenges associated with global change include not only outstanding research on its causes and consequences, but also intensive and productive research in effective climate adaptation and, ultimately, solutions. The proposed Minor will emphasize not only basic climate literacy, but also an orientation toward finding solutions space in both technological and social change.

## **Pillar 3: The Arizona Advantage**

**3.1A and 3.1B: Strengthen the impact and visibility of UA's commitment to equity and support of diverse communities, and Institutionalize commitment to Hispanic advancement.** As a campus-wide Minor, the proposed program will provide opportunities to advance this component of the University’s Mission and Strategic Plan. Lower-income communities and communities of color are affected disproportionately by climate change, creating an additional motivation for a wide range of students to be interested in understanding climate change, its effects and solutions. We propose to engage in specific targeted outreach to these communities for students interested in global change. Examples may include the Arizona's Science, Engineering, and Math Scholars (ASEMS) Program, initiatives to promote Campus-Community Outreach for STEM Diversity, and other programs of the Office of the Provost, Hispanic Serving Institution (HSI) Initiatives, the Office of Diversity and Inclusive Excellence, and the Office of Leadership and Organizational Development.

III. **MINOR REQUIREMENTS**– complete the table below by listing the minor requirements, including minimum number of credit hours, required core, electives, and any special requirements. **IV. CURRENT COURSES**—using the table below, list all existing courses included in the proposed minor. You can find information to complete the table using the [UA course catalog](#) or [UAnalytics](#) (Catalog and Schedule Dashboard> “Printable Course Descriptions by Department” On Demand Report; right side of screen). If the courses listed belong to a department that is not a signed party to this implementation request, upload the department head’s permission to include the courses in the proposed minor and information regarding accessibility to and frequency of offerings for the course(s). Upload letters of support/emails from department heads to the “Letter(s) of Support” field on the UAccess workflow form. Add rows to the table, as needed.

Table IV is in a separate attachment.

We recognize the growing imperative for the University to provide on-line options for undergraduate education. We believe that the nature of the material that is the focus of this Minor will adapt well to on-line delivery, in part because of abundant availability of information regarding global change and its components. *A student is currently able to complete the majority of the coursework necessary to fulfill the minor requirements online.* SNRE faculty and leadership are engaged with the Office of Digital Learning personnel for on-line education program development and marketing. We are confident that all pedagogical and strategic objectives of the Minor can be met fully in the emerging hybrid model of University education that meets Quality Matters standards.

- V. **NEW COURSES NEEDED** – using the table below, list any new courses that must be created for the proposed program. If the specific course number is undetermined, please provide level (ie CHEM 4\*\*). Add rows as needed. Is a new prefix needed? If so, provide the subject description so Curricular Affairs can generate proposed prefix options.

No new courses are needed at this time, but we will welcome new or additional courses as they are developed or identified.

\*In development (D); submitted for approval (S); approved (A)

Subject description for new prefix (if requested). Include your requested/preferred prefix, if any:

VI. **FACULTY INFORMATION**- complete the table below. If UA Vitae link is not provided/available, attach a short CV (2-3 pages) to the end of the proposal or upload to the workflow form. UA Vitae profiles can be found in the [UA directory/phonebook](#). Add rows as needed. Delete the **EXAMPLE** rows before submitting/uploading. **NOTE: full proposals are distributed campus-wide, posted on committee agendas and should be considered “publicly visible”.** Contact [Pam Coonan](#) and [Martin Marquez](#) if you have concerns about CV information being “publicly visible”.

**VII. STUDENT LEARNING OUTCOMES AND CURRICULUM MAP**—describe what students should know, understand, and/or be able to do at the conclusion of this minor. Work with [Office of Instruction and Assessment](#) to create a curricular map using Taskstream. Include your curricular map in this section (refer to Appendix A for sample Curriculum Map generated using Taskstream).

#### **Learning outcomes**

1. **Define, differentiate, and explain** the nature of climate change and the importance of modern sustainable best practices across human societies;
2. **Associate, examine, and compare** how to infer meaning and inspire personal and collective action through written, visual, and verbal communication to a variety of audiences;
3. **Summarize, implement, and appraise** sustainable thinking as it relates to addressing current and future real-world climate change challenges and crises;
4. **Design, practice, and manage**, a personal and professional toolbox of sustainability knowledge, skills, and abilities useful for successful professional careers and engaged citizenship

**IX. ANTICIPATED STUDENT ENROLLMENT**-complete the table below. What concrete evidence/data was used to arrive at the numbers?

<b>5-YEAR PROJECTED ANNUAL ENROLLMENT</b>					
	1 <sup>st</sup> Year	2 <sup>nd</sup> Year	3 <sup>rd</sup> Year	4 <sup>th</sup> Year	5 <sup>th</sup> Year
Number of Students	10	20	30	50	70

Data/evidence used to determine projected enrollment numbers:

Enrollment in closely related minors at peer institutions, UCSD and University of Montana. Past four years of enrollment in minor curriculum courses (see attached).

**X. ANTICIPATED MINORS AWARDED**- complete the table below, beginning with the first year in which minors will be awarded. How did you arrive at these numbers? Take into consideration departmental retention rates.

<b>PROJECTED MINORS AWARDED ANNUALLY</b>					
	1 <sup>st</sup> Year	2 <sup>nd</sup> Year	3 <sup>rd</sup> Year	4 <sup>th</sup> Year	5 <sup>th</sup> Year
Number of Minors	0	10	20	30	50

Data/evidence used to determine number of anticipated minors awarded annually:

Enrollment in closely related minors at peer institutions, UCSD and University of Montana. Past four years of enrollment in minor curriculum courses (see attached).

**XI. PROGRAM DEVELOPMENT TIMELINE-** describe plans and timelines for 1) marketing the minor and 2) student recruitment activities.

1). Marketing

During the first year, we will work with CALS marketing to develop an attractive webpage for the minor on the School of Natural Resources website as well as the lead generation website for the major, <https://naturalresources.arizona.edu/>. As soon as the minor is approved, announcements and promotional materials will be sent to all advisors via UPAC. Fliers will be posted around campus. We will request brief guest speaker spots or instructor announcements in the beginning of classes that are part of the minor curriculum. Additionally, we will place advertisements in the Daily Wildcat and via social media. During subsequent years, we will update and maintain the minor webpages as needed. CALS's marketing team will also create a video profile of a student in the program to use on websites, social media posts, and YouTube.

2). Recruitment

Students in Natural Resources are organizing a Global Change club (applying through ASUA) that will help recruit students to the minor. Initially, affiliated faculty will continue to actively participate in promoting minor in classrooms and with student clubs (Students for Sustainability, Marine Sciences Awareness, etc.) and with special outreach to fields of study that could greatly influence our society's trajectory in the coming century; Political Science, Journalism, Law, Business, etc. Social Media. The minor will be advertised during all on campus tabling events where majors are represented (Meet Your Major fair, Career Days, etc.). These activities will continue beyond the first two years of the program.

**XII. DIVERSITY AND INCLUSION**-describe how you will recruit diverse students and faculty to this minor. In addition, describe retention efforts in place or being developed in order to retain students.

Climate change and its affects are linked directly to social and environmental justice (Levy and Patz 2015). Communities of color and economically disadvantaged people are affected disproportionately by global change. These disparities includes exposure to environmental contamination, heat and drought stress, crop failures, water shortages, unsafe workplace conditions, and disease. Global change interacts with the drivers of economic inequality and poverty to produce greater effects on communities of color worldwide. Within the US, Hispanic, African American, and Native American communities are far more likely to be exposed to the physical and economic consequences of global change as it is expressed where they live and work. As a consequence, we consider recruiting students from these affected communities into the Minor to be a central goal. A recent National Academy Study (2020) noted that diversifying the community of practice in research may be as important as the societal implications of climate change itself. As a fully-recognized Hispanic Serving Institution that is also a leading R1 University with leading expertise in global change, UA is uniquely positioned to deliver global change education to a diverse student body.

This minor highlights the need for listening, collaboration, and innovation among people with different perspectives, values, and backgrounds to create climate resilient economies and positive social impact. The structure of the Minor reflects this intention: by leading students from problem analysis to climate solutions, we will encourage students to think creatively about how climate justice can be applied to their own communities. We will collaborate with other campus centers and community stakeholders to amplify these student-driven thoughts, experiences, and creations to improve human societies in light of climate change. This includes cooperating with important UA initiatives that seek to build a diverse and inclusive student body in areas critical to sustainability, such as the Haury Program in Environment and Social Justice (<https://www.haury.arizona.edu/>) and the Arizona Science, Engineering, and Math Scholars Program (ASEMS, <https://asems.arizona.edu/home> ).

April 28, 2020

Dr. John Koprowski  
Director  
School of Natural Resources  
and the Environment  
University of Arizona  
Tucson, Arizona

Dear Dr. Koprowski:

I have carefully reviewed the course structure and justification for the Minor in Climate Change and Society at the University of Arizona, and I enthusiastically support its establishment. It is precisely the kind of program needed at this critical time, and the UArizona is precisely the university to offer this education to our state, our nation, and our world. The breadth of the proposed offering underscores what I've always known...that the UArizona is rich with expertise in a way that few places are. My very strong support for this Minor comes from a number of perspectives.

During my time as Director of [the Office of Climate and Society at the National Oceanic and Atmospheric Administration](#) (1986 – 2003) I had the pleasure of creating and managing a number of research programs aimed at advancing the understanding of the relationship between human systems and our climate system. These include the [Regional Integrated Sciences and Assessments Program](#) of which the [UArizona Climate Assessment of the Southwest \(CLIMAS\)](#) and the [International Research Institute for Climate and Society \(IRI\)](#) at Columbia University are two. While successful as research endeavors, these programs miss the opportunity to educate the next generation of thinkers and doers with the skills and understanding needed to succeed, regardless of the careers students might ultimately choose.

During my time as ASU President Michal Crow's Senior Advisor for Institutional Transformation (2003 – 2011) I was tasked with designing and establishing the Global Institute of Sustainability and its [School of Sustainability](#), which included Minors in Sustainability. To my dismay at the time, the offerings we came up with lacked the breadth of what I had hoped for, especially in the natural and physical sciences. This, because ASU simply didn't have the personnel to cover those critically important topics. At the UArizona, we do, and the Minor as proposed, benefits from our diverse, world class in-house expertise.

In addition to the above, I also bring the perspective of one who serves on the Boards of Directors of a number of national not-for-profit environmental organizations. These include as past chair at the [National Council for Science and the Environment \(NCSE\)](#) and as chair at

[Second Nature](#), which oversees the [Climate Leadership Network](#) and the [University Climate Change Coalition \(UC3\)](#), in which UArizona President Bobby Robbins has recently become very engaged. I also serve on the Advisory Council of George Washington University's [Planet Forward Program](#) led by Emmy Award winning journalist Frank Sesno. I mention this because, over the years these organizations have discussed ways to encourage universities to do precisely what is proposed...to provide all college students with an understanding of the complex world we live in, in the context of a changing climate. These discussions have led to little progress at a national level, so over the weekend I explored with them (fellow board members and organizational leadership) the Minor being proposed. Without exception they enthusiastically endorsed our initiative, indicating their willingness to promote the Minor through their networks, which, in aggregate, number well over 100,000 individuals across the globe.

Over the years, I have also served on climate-related panels of the National Academies of Science, as lead author of National Climate Assessments, and as program reviewer of academic sustainability programs in the U.S. and abroad. These experiences give me a rich exposure of what is being offered elsewhere. I can tell you with confidence, that this Minor is unique in its breadth, depth and quality of offerings.

This brings me to perhaps the most valuable of perspectives, that of (interim) Director of the Arizona Institutes for Resilience at the University of Arizona. As you know, this newly formed institute results from President Bobby Robbins', Provost Liesl Folks' Senior Vice President for Research and Innovation, Betsy Cantwell's, and Senior Vice President for Marketing and Communications, Steve Moore's strong desire to promote Environment at the UArizona.

On March 1, 2020 the Environment Design Committee formed by Dr. Cantwell, and which I chaired, presented her with our recommendations. She was very pleased with the vision and recommendations we offered her, and she encouraged us to proceed with implementation. Amongst the recommendations was to increase our educational offerings, including, but not limited to an expanded "experiential" learning offering for undergraduates. In addition, the committee proposed that the UArizona become the "go to" place for all students interested in being part of the solution to the global climate crisis. The Minor being proposed is precisely the very best next step in that direction.

Further, by incorporating the use of the many valuable UArizona assets like the Biosphere2, the Desert Laboratory on Tumamoc Hill, the Tree Ring Lab, to name just a few, along with our countless environmental field experiments and our relationships with the Southern Arizona management and broader communities, we can offer our students an unparalleled learning experience...something which, as you are aware, Provost Folks is keenly interested in seeing us advance. From what I know, I am confident that this Minor supports directly the UArizona's senior leadership's commitment to strengthen and elevate environmental education as an avenue for institutional growth and to promote our global reputation of expertise at the nexus of climate change and society.

For the reasons articulated above, and in particular from my position as interim director of AIR, I cannot be more supportive of the proposal to establish the Minor in Climate Change and Society at the UArizona, and with absolutely no reservation offer the full backing of my institute and its experts to advance its implementation. Please let me know how we might help.

Please don't hesitate to reach out if you have questions or would like further input.

Sincerely and with best regards,

A handwritten signature in black ink that reads "James L. Buizer". The signature is written in a cursive style with a large initial "J" and "B".

April 1, 2020

Dear Dr. Koprowski,

We would be happy to include AREC 360 *The Poverty and Development of Nations* as an elective option for your new minor in Climate Change and Society. For the moment, there is ample space for students pursuing a minor in your new program. Should space become constraining, we will seek a larger classroom to accommodate all your majors and minors. We enthusiastically welcome all SNRE students, be they majors and minors in your new program or in existing programs, into AREC 360.

Please be advised we have two other classes, which would be excellent general education options for your majors and minors:

AREC150C *Sustaining Life: The Global Economy of Food (Tier 1)*  
AREC210 *Understanding the World of Commerce (Tier 2)*

We wish you success in launching and growing your new minor in Climate Change and Society.

Sincerely,

Gary Thompson

John

I'm glad to see that you are proceeding with a minor in Climate Change and Society. We are happy to approve inclusion of ENV5 210 Fundamentals of Environmental Science and Sustainability, ENV5 310 Ecosystem Health and Justice, and ENV5 410 Microbial Biogeochemistry and Global Change in this minor degree program. Please let us know if we can do more to support you.

Jim

John,

I support including these courses in the new minor.

Elliott Cheu sent over the proposal docs to me earlier this morning.

I think, 436A | Fundamentals of the Atmospheric Sciences would fit in the Climate Basics category

Also ENVS 454 Water Harvesting would seem to be appropriate under Sustainable Actions and Solutions

Also it seems like you have avoided tier 1 gen ed course which makes sense. If opinions change about that exclusion ATMO 170 and HWRS 170 both offer a solid intro to earth system processes including human actions and activities.

Thanks,

Tom

Dear Tom,

I know that you are not getting enough emails and felt the need to send you another...apologies! As you know, The School of Natural Resources and the Environment is developing a minor in Climate Change and Society and requests to use the following course from your department. These will be among a list of choices so we don't foresee this adding a great burden to your instructors. Please let

us know if you approve by providing us with a letter of support (or email) indicating that you approve of the use of these courses that supersedes your previous note of support. Please feel free to copy and/or edit the text below into your letter as you see fit. Many thanks and let us know if you have any questions!

To Whom It May Concern:

I approve of the use of the following course for the proposed minor, Climate Change and Society, and enthusiastically support the minor's creation.

HWRS 201 Water Science and the Environment  
ATMO 336 Weather, Climate, and Society  
ATMO 421 Physical Climatology

Dear John:

I certainly do enthusiastically support the creation of this minor!

I am wondering if you're familiar with our other courses that seem potentially relevant, specifically HIST 355: US Environmental History; HIST 356: Global Environmental History and HIST 428: Food, Health and Environment in History. Might any of these fit into your plans?

All best,

Alison

Prof. Alison Futrell

Dear Dr. Koprowski:

The School of Journalism supports the use of our courses in your new Minor in Climate Change and Society. We are so pleased to be a part of this minor. We look forward to working with you and wish you great success. So long as seats are available, we agree to give regular access to the courses listed below to students in the Minor in Climate Change and Society:

- JOUR 455 Environmental Journalism
- JOUR 465 Issues in Covering Science and the Environment

There is no conflict with School of Journalism programs, and there are certainly opportunities for synergy moving forward. We are eager to welcome your students into our relevant courses.

If I can be of any assistance to you with this minor, please do not hesitate to contact me. The School of Journalism looks forward to our collaboration.

With best wishes,

Carol B. Schwalbe  
Professor | Director  
School of Journalism  
University of Arizona

To whom it may concern

The School of Geography and Development is pleased to be asked to participate in the new proposed minor in Climate Change and Society. I have consulted with faculty who teach the courses below and they are happy to receive students in the minor.

I specifically approve of the use of the following courses offered through the School of Geography and Development for the minor Climate Change and Society.

EVS 374 Geography, Social Justice and the Environment  
EVS 363 Climate Change: Human Causes, Social Consequences and Sustainable Responses  
EVS 462 Environmental Law, Geography and Society  
EVS 445 Geographies of International Environmental Governance  
GEOG 230 Our Changing Climate  
GEOG 260 Environmental Studies: Ideas and Institutions  
GEOG 302 Introduction to Sustainable Development  
GEOG 404 Politics of Nature  
GEOG 430 The Climate System

Sincerely,

Regents Professor of Geography and Development, University of Arizona

**Undergraduate Minor Peer Comparison Chart-** Select two peers for completing the comparison chart from (in order of priority) [ABOR-approved institutions](#), [AAU members](#), and/or other relevant institutions recognized in the field. The comparison chart will be used to identify typically required coursework, themes, and experiences for minor programs within the discipline. The comparison programs are not required to have the same minor name as the proposed UA program. Information for the proposed UA program must be consistent throughout the proposal documents. Delete EXAMPLE columns once ready to submit/upload.

Minor name, institution	Proposed UA Program: Climate Change: Science and Solutions	Peer 1: Climate Change Studies, University of Montana	Peer 2: Climate Change Studies, University of California, San Diego
Current# of enrolled students		70	27
Minor program description	<p>People, animals, plants, and all living organisms are being impacted by long-term changes in temperatures and ecosystems around the world. This global change is an increasingly dominant fact of life for all human and natural systems, and we can see the impacts all around us. In many parts of the world, governments and organizations have already been forced to adapt to ensure basic services that are essential for human civilization—including water, food, clean air, livable climate, renewable resources, and natural areas—will continue to be available for their communities.</p> <p>Climate change is also creating unprecedented new opportunities for innovation and economic growth; the jobs of the future are already aligning with solving the tremendous reorganization of the global economy driven by this global change. College students today will live their entire personal and professional lives in a world that is being shaped by these rapidly-changing forces; there is no part of our world that will not be touched by global change.</p> <p>The Minor in Climate Change and Society is designed to supplement the career interests of students in any field who want to understand how global change will affect their professional and personal lives and adapt to new emerging career opportunities. The CCS Minor curriculum ensures basic competency in three primary areas, taking advantage of UA Arizona’s expert faculty. First, students will have the opportunity to understand the physical and natural realities of global change, including what is driving these changes and how they are being manifested in today’s world. The component of the Minor is designed to enable students, as current and future citizens, to distinguish fact from fiction, and learn important skills in critical thinking about important global issues. Second, the Minor will examine how societies are adapting to address these challenges, both</p>	<p><a href="https://www.cfc.umt.edu/ccs/about/default.php">https://www.cfc.umt.edu/ccs/about/default.php</a> The University of Montana offers the nation's first interdisciplinary, undergraduate degree program in climate change. The minor in Climate Change Studies (CCS) combines rigorous training in sciences with coursework in ethics and policy to offer students a unique, multidisciplinary understanding of climate change. The CCS minor provides students opportunity to become informed and engaged on the issue — from multidisciplinary coursework, to field studies, to study abroad and service learning opportunities.</p> <p>“The climate change topic is rapidly evolving from only an earth science issue to a technological, economic and sociological issue. We have designed a broad interdisciplinary curriculum to reflect this expanding focus.” Dr. Steve Running, Climate Change Studies Program Director, and a lead author on the Nobel Prize winning Intergovernmental Panel on Climate Change</p> <p>The CCS minor educates students in three areas of the climate change issue: science, society, and solutions. Coursework in the minor provides a foundation that enables students to engage the scientific, societal and political dimensions of global climate change. Further, the focus on solutions with its orientation toward applied learning helps students develop critical thinking and problem solving skills.</p> <p>The Climate Change Studies Program is a joint program with the Davidson Honors College, College of Forestry and Conservation, College of Humanities and Sciences, and Missoula College's Energy Technology Program that draws on the expertise of faculty across the university and includes students from more than 20 majors.</p>	<p><a href="https://scripps.ucsd.edu/undergrad/curriculum/climate-change-studies-minor">https://scripps.ucsd.edu/undergrad/curriculum/climate-change-studies-minor</a> Climate change is the most serious challenge of our lifetimes, posing serious risks to economic and social structures on local, national and global scales. This interdisciplinary minor curriculum highlights UC San Diego’s broad campus expertise in understanding and responding to the challenges of climate change. The minor covers an understanding of the scientific, social, political and economic dimensions of climate change, and involves students in developing solutions such as greenhouse gas mitigation strategies, climate adaptation projects and educational approaches. The curriculum provides connections with any primary field of study and is open to students from any major. The minor places a strong emphasis on interdisciplinary solution-based thinking, a skill which is relevant to solving many 21st century problems. A hallmark of the climate change studies minor is the practicum requirement, in which students learn about carbon neutrality initiatives and climate change research on campus (e.g. CCS101 and 102), and then complete an applied project relevant to their major or interests in CCS 190 or CCS 199. The Minor consists of twenty-eight units of coursework, at least twenty of which must be upper-division. Students must earn at least a letter grade of C- in courses used for the minor, with the exception of 199 courses or other courses that are only offered for a “P/NP” grade.</p>

<b>Target careers</b>	Will be highly variable and based on students' chosen career field.	Sustainability coordinators or educators; incorporation of climate lens in chosen career or graduate field of study; highly variable as students in the minor represent 20-25 majors on campus.	NA
<b>Minimum total units required</b>	21	21	28 units (quarter system)
<b>Minimum upper-division units required</b>	12	NA	20
<b>Total transfer units that may apply to minor</b>	6	NA	NA
<b>List any special requirements to declare/admission to this minor (completion of specific coursework, minimum GPA, interview, application, etc.)</b>	Meeting with minor advisor to go over the requirements	Meeting with minor program coordinator to go over the requirements and discuss interests and degree plans	NA
	<p>All courses are 3 units except those marked with an * which are 4 units</p> <p>Introductory course RNR 101 Global Sustainability and Natural Resources</p> <p>Area Study: Choose a minimum of 6 units from each of the following areas</p> <p>Climate Basics (please choose a minimum of one course at the 300-400 level) ATMO 336 Weather, Climate and Society ATMO 421 Physical Climatology ENVS 210 Fundamentals of Environmental Sustainability ENVS 410 Microbial Biogeochemistry and Global Change GEOG 230 Our Changing Climate GEOG 430 The Climate System GEOS 212 Intro to Oceanography GEOS 220 Environmental History of the Southwest GEOS 342 History of Earth's Climate GEOS 412 Ocean Sciences GEOS 478 Global Change HWRS 201 Water Science and the Environment RNR 458 Ecosystem Ecology and a Sustainable Future RNR 429 Ecological Climatology</p>	<p>Introductory Course Introduction to Climate Change: Science and Society, CCS 103X, 3 cr, Fall semester</p> <p>This is an introductory and foundational course on the scientific and social dimensions of global climate change. The course provides students with a breadth of knowledge that builds connections across the scientific, social, political, and technological dimensions of this complex global issue. This course counts for General Education credit in the "X" perspective. It is open to all students and required for the Climate Change Studies minor. There is also a section for Honors students.</p> <p>Climate Change Science (natural and physical sciences)</p> <p>The climate change science area introduces students to the basic processes by which the biosphere, atmosphere, hydrosphere, lithosphere, and cryosphere interact to produce and respond to climatic change. Students choose any six credits from the following courses:</p> <p>Science of Climate Change: NRSM 281, 3 cr., Fall Weather and Climate: EARTH 303N, 3 cr.,</p>	<p>Climate Change: Solutions</p> <p>a. Required Course. Students choose one of the following courses: SIO 109/POLI 117. Bending the Curve: Solutions to Climate Change (recommended) ESYS 103/MAE 124. Environmental Challenges: Science and Solutions BIBC 140. Our Energy Future—Sustainable Energy Solutions</p> <p>2. Climate Change: Understanding the Science</p> <p>a. Required Course. Students choose one of the following two courses: SIO 25. Climate Change and Society SIO 117. The Physical Basis of Global Warming (recommended for students in science, math or engineering majors)</p> <p>b. Climate change science elective. Students select at least one of the following electives: SIO 10. The Earth SIO 20. The Atmosphere SIO 35. Water</p>

Minor requirements. List all minor requirements including core and electives. Courses listed must include course prefix, number, units, and title. Mark new coursework (New). Include any limits/restrictions needed (house number limit, etc.). Provide email(s)/letter(s) of support from home department head(s) for courses not owned by your department.
